Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 7-8, "said coded sub-block may have been subject to additional processing" is unclear if the coded sub-block has been subject to additional processing or not.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 1-2 are rejected under 35 U.S.C. 102(a) as being anticipated by Lucent Technologies Inc. (WO 00 27064) or Eriksson et al "Comparison of link quality control strategies for packet data services in EDGE".

Regarding claims 1-2, Lucent and Eriksson disclose a method comprising receiving packet data units in a buffer; concatenating a plurality of packet data units to produce a transport block set; segmenting the transport block set; coding the transport block set to a coded block; rate matching the coded block to form coded sub-blocks; and scheduling a coded sub-block for

Art Unit: 2661

transmission, interleaving at least the coded sub-block, whereby the coded sub-block may have been subject to additional processing (see abstract; page 5, line 23-page 10, line 14; figures 3 & 4 of Lucent and section II of Eriksson).

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiu et al (6,624,767).

Regarding claims 1-2, Shiu disclosed a method comprising receiving packet data units in a buffer; concatenating a plurality of packet data units to produce a transport block set; segmenting the transport block set; coding the transport block set to a coded block; rate matching the coded block to form coded sub-blocks; and scheduling a coded sub-block for transmission, interleaving at least the coded sub-block, whereby the coded sub-block may have been subject to additional processing (see abstract; figure 2A; col. 4, line 8-col. 5, line 8).
